Introduction

A census of Population and Housing is viewed as singularly one of the most critical components in a country's national statistical system. It provides benchmarks of population and housing stock, as well as baseline information for the production of other statistics. It is a reliable source of comprehensive data about the demographic and socio-economic characteristics of a country's population. Additionally, census statistics serve to inform as to the household and housing conditions at various levels.

The Statistical Act mandates that the Department of Statistics undertakes all censuses and national surveys within the Federation of St Kitts and Nevis. In keeping with this mandate, St Kitts and Nevis conducted a Population and Housing Census in 2022. Initially slated for 2021, the Covid-19 pandemic necessitated a change to 2022. Through face-to-face interviews, field personnel visited and enumerated every household and individual within the Federation. Where households or individuals either declined to be interviewed or were not available to be interviewed, alternate means were utilized to collect basic information for these individuals.

The Department of Statistics wishes to acknowledge the various partners and stakeholders who would have contributed to this undertaking. Each household and individual who would have responded whether in full or in part must be commended as it is only through this willingness to be a part of the national endeavor can the Department offer this and subsequent reports. Similarly, the enumerators and supervisors played the pivotal role as the conduit through which the data was collected. The staff of the Department must also be acknowledged for the dedicated roles played in the data processing phases.

This report seeks to provide a general summary of findings for the 2022 population and housing census. While not comprehensive in nature, it offers a succinct overview of the census results and therefore the characteristics of the population and the conditions under which they exist. All population figures quoted refer to the non-institutional population of the Federation. That is, only members of private households are referenced and it does not include counts of persons within institutions such as prisons, juvenile facilities, hospitals, hospices and nursing homes. Key tabulations of both housing and population characteristics are provided at the federal and island level. Subsequent thematic reports will offer greater detail with varying levels of disaggregation.

Historical Review

The nations within the OECS and Caricom approach the Population and Housing census as a regional undertaking. Census rounds are synchronized with most countries adopting a regional timeframe and a regional questionnaire base for their individual censuses. As such most countries conduct their Population and Housing Censuses in years ending with one (1) or zero (0) once the resources allow. The instrument used would have core common questions with countries adjusting response options for cultural nuances as well as adding or subtracting questions as deemed necessary.

This iteration of the Population and Housing census was the 14th decennial census to be undertaken in St Kitts and Nevis. The earliest census in the Federation dates back to 1871. Censuses were conducted every ten years up to 1921. There was a break in the series at this point with no census being conducted again until 1946 with the next census to follow in 1960. Thereafter, the censuses were conducted with regularity up to present day.

Population Size and Growth

The enumerated population of the Federation of St Kitts and Nevis for 2022 is 51,320 persons. This total represents an 8.7% increase over the 2011 census count of 47,195 persons. There is an increase of 4,125 persons over the 11-year period with an average annual increase of 0.76% per year for the intercensal period.

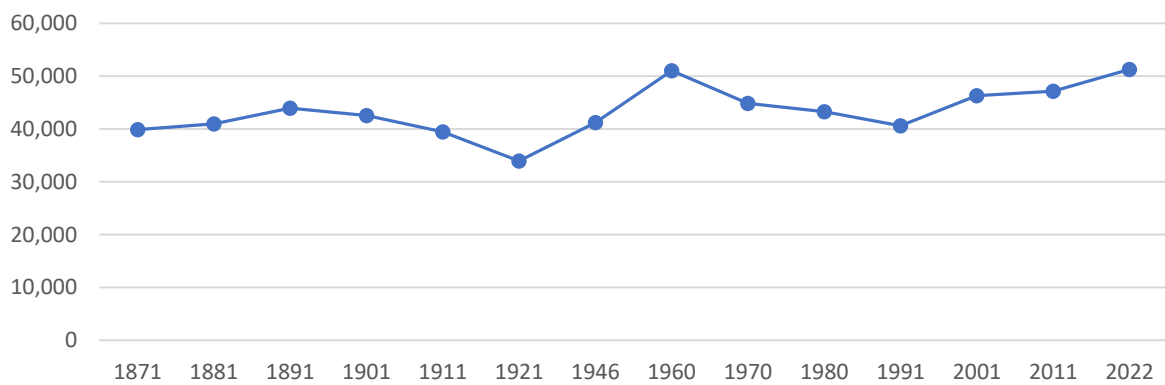

Table 1: Intercensal Population Change 1871 – 2022

Census Year	Population	Total Increase	Intercensal Change (%)	Annual (%) Rate of Growth
1871	39,872			
1881	41,001	1,129	2.83	0.28
1891	43,981	2,980	7.27	0.70
1901	42,556	-1,425	-3.24	-0.33
1911	39,498	-3,058	-7.19	-0.75
1921	33,974	-5,524	-13.99	-1.51
1946	41,206	7,232	21.29	0.77
1960	51,023	9,817	23.82	1.53
1970	44,884	-6,139	-12.03	-1.28
1980	43,291	-1,593	-3.55	-0.36
1991	40,618	-2,673	-6.17	-0.58
2001	46,325	5,707	14.05	1.31
2011	47,195	870	1.88	0.19
2022	51,320	4,125	8.74	0.76

The population of St Kitts and Nevis has fluctuated greatly over the years. The 2022 census population count is the largest enumerated population on record. The previous highest population was recorded in 1960 with 51,023 persons. The lowest population was 33,974 recorded in 1921. The largest intercensal growth was noted in 1960 where there was a 23.8%

increase over the 1946 census figure with an annual average growth rate of 1.53%. The 1921 census registered the largest period over period decrease in population (-14%), with an annual rate of change of -1.51% from the 1911 census of population. The 2022 population count registers the third consecutive increase in population. The Federal population has increased every census year after the 1991 census.

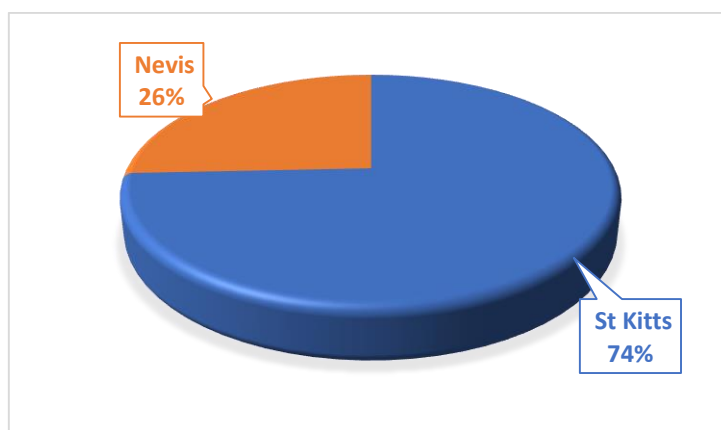

*Chart 1: Population Growth by Census Years
1871 - 2022*

Geographic Distribution

The island of St Kitts is home to 38,138 persons. This is 74% of the federal population. Nevis with 13,182 persons is home to the remaining 26% of the population.

Chart 2: Population Share by Island 2022

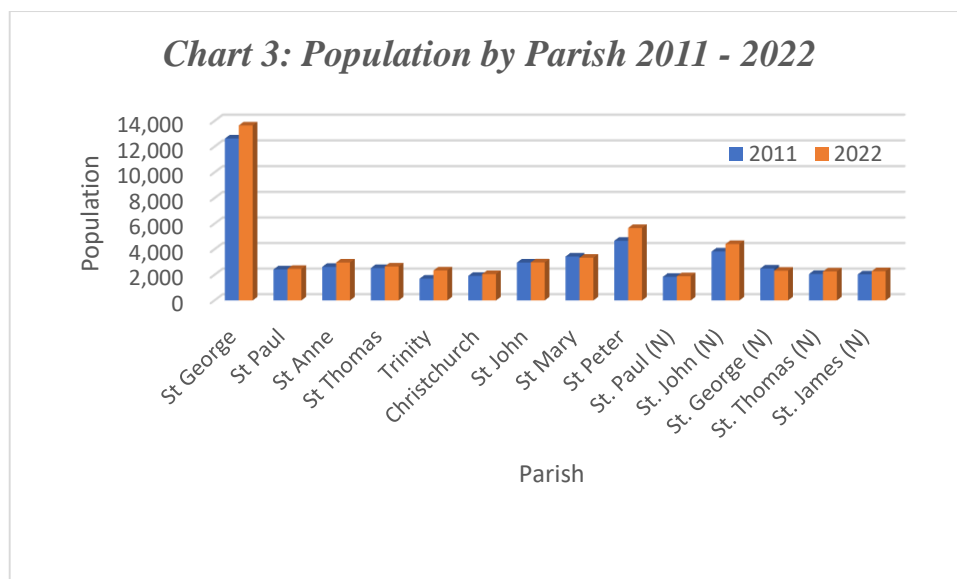

The population of St Kitts would have grown by 9.2% over the period from 34,918 persons in 2011. This growth offsets the 0.8% decrease registered in 2011 where the population fell by 299 persons from 35,217 in 2001. Nevis registered a 7.4% increase in 2022 moving from 12,277 in 2011. This growth is lower than the 10.5% increase registered in 2011 where the population grew by 1,169 persons up from the 11,108 persons counted in 2001 but indicates a pattern of growth for the last three census periods.

Table 2: Population Movement by Parish 2001 - 2022

Parish	Population				
	2001	2011	% Change	2022	% Change
St George	13,251	12,635	-4.6	13,652	8.0
St Paul	2,453	2,432	-0.9	2,468	1.5
St Anne	3,167	2,626	-17.1	2,969	13.1
St Thomas	2,395	2,535	5.8	2,657	4.8
Trinity	1,678	1,701	1.4	2,348	38.0
Christchurch	2,061	1,922	-6.7	2,064	7.4
St John	3,248	2,962	-8.8	2,972	0.3
St Mary	3,423	3,435	0.4	3,341	-2.7
St Peter	3,541	4,670	31.9	5,667	21.3
St Kitts	35,217	34,918	-0.8	38,138	9.2
St. Paul (N)	1,790	1,847	3.2	1,888	2.2
St. John (N)	2,901	3,827	31.9	4,416	15.4
St. George (N)	2,564	2,496	-2.7	2,323	-6.9
St. Thomas (N)	2,047	2,069	1.1	2,265	9.5
St. James (N)	1,806	2,038	12.8	2,290	12.4
Nevis	11,108	12,277	10.5	13,182	7.4
St Kitts and Nevis	46,325	47,195	1.9	51,320	8.7

There was significant intercensal movement amongst parishes. On St Kitts, the parish of Trinity registered a 38% increase in population over the period as against a 1.4% increase in 2011. St Peter saw a 21.3% increase which follows a 32% increase in 2011. St Anne also registered a double-digit percent increase moving by 13%. Increases were noted in every other parish with the exception of St Mary which registered a 2.7% decrease from 2011. Of note, St John's 0.3% increase is negligible and follows an 8.8% decrease in population in 2011.

On Nevis, the parish of St John registered the largest percentage change growing by 15% over the period which follows a 32% increase registered in 2011. St James and St Thomas also saw significant changes with 12.4% and 9.5% respectively. A 7% decrease in population for St George follows a 2.7% decrease registered in 2011.

The population share by parish remains largely unchanged for the period 2011 to 2022. St George remains the largest parish by population on St Kitts. There has been a gradual decrease in this share over the last three intercensal periods moving from 37.6% in 2001 to 36.2% in 2011 and now 35.8% in 2022. St Peters has seen a trend in growth over the same time period moving from 10% in 2001, to 13.4% in 2011 and increasing further to 14.9% in 2022. St Peters is now firmly established as the second largest parish in St Kitts by population share. Trinity with 6.2% and Christchurch with 5.4% are currently and historically the two smallest parishes by population share on St Kitts.

St John remains the largest parish by population share on the island of Nevis. This proportion has increased over the last three censuses. In 2001, the parish held 26.1% of the population. This grew to 31.2% in 2011 with a further growth to 33.5% in 2022. While St George remains the second largest parish by population, there has been a constant decrease in this proportion. The 2001 share of 23.1% fell to 20.3% in 2011 and has decreased further to 17.6%

in 2022. This share is similar to St Thomas (17.2%) and St James (17.4). St Paul is historically the smallest by population with this share decreasing from 16.1% in 2001 to 14.3 in 2022.

Table 4: Population Distribution by Parish 2001 - 2022

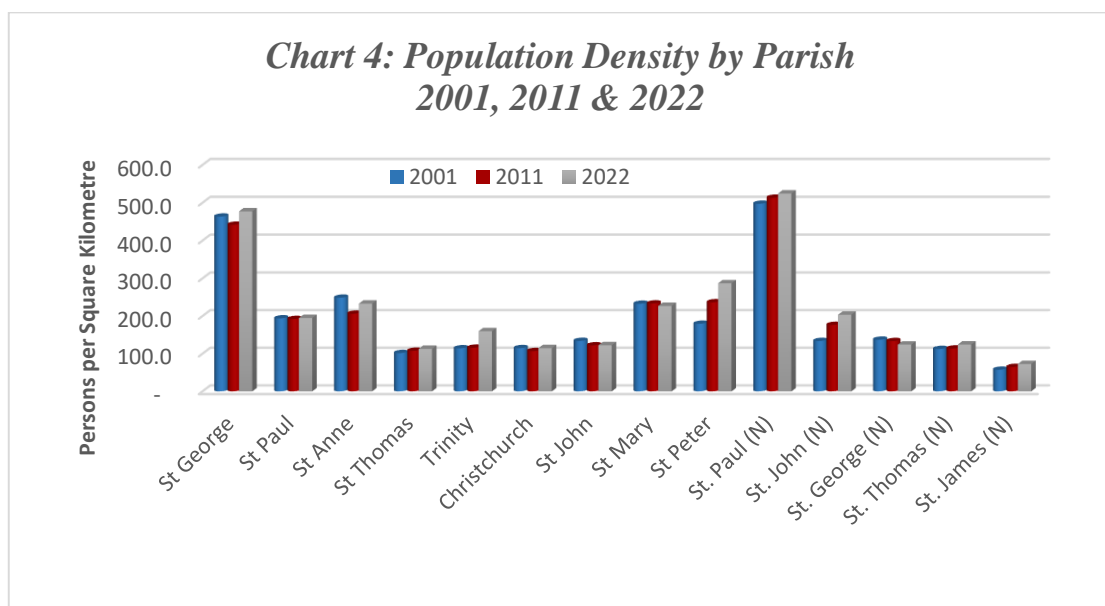

Parish	Population					
	2001	% Dist.	2011	% Dist.	2022	% Dist.
St George	13,251	37.6	12,635	36.2	13,652	35.8
St Paul	2,453	7.0	2,432	7.0	2,468	6.5
St Anne	3,167	9.0	2,626	7.5	2,969	7.8
St Thomas	2,395	6.8	2,535	7.3	2,657	7.0
Trinity	1,678	4.8	1,701	4.9	2,348	6.2
Christchurch	2,061	5.9	1,922	5.5	2,064	5.4
St John	3,248	9.2	2,962	8.5	2,972	7.8
St Mary	3,423	9.7	3,435	9.8	3,341	8.8
St Peter	3,541	10.1	4,670	13.4	5,667	14.9
St Kitts	35,217	100.0	34,918	100.0	38,138	100.0
St. Paul (N)	1,790	16.1	1,847	15.0	1,888	14.3
St. John (N)	2,901	26.1	3,827	31.2	4,416	33.5
St. George (N)	2,564	23.1	2,496	20.3	2,323	17.6
St. Thomas (N)	2,047	18.4	2,069	16.9	2,265	17.2
St. James (N)	1,806	16.3	2,038	16.6	2,290	17.4
Nevis	11,108	100.0	12,277	100.0	13,182	100.0
St Kitts and Nevis	46,325		47,195		51,320	

Population density refers to the number of persons resident per square unit of land. As the population of the country changes, so too does its population density. The larger the population gets, the denser is the population. This figure tends to be higher in urban areas and the communities closer to urban areas and conversely lower in rural and less urban spaces as persons tend to gravitate towards potential employment opportunities, greater access to goods and services and reduced transportation and travel costs.

The parish of St George has always been the densest parish within St Kitts. Basseterre, being the capital and business center of the country would serve to attract persons not only there but also to its immediate environs. Increased land ownership opportunities in St George and St Peter translate into more persons availing themselves of the opportunity to reside closer to their place of work and or simply closer to the central business district. As such one would note that there are marked increases in the density of these parishes consistent with the noted population increases referenced prior.

Trinity also shows a significant increase in population density which aligns with the increase in population. In this instance, the increased land ownership coupled with the attraction of residential options close to the two adjacent universities would undoubtedly have served as catalysts for this increased density.

St Anne would have registered a significant increase in density over the period under review. While not yet back to similar levels as 2001, the increase is significant as it highlights the investments made both in land and home ownership in the parish as well as the attraction of the parish as an urban center.

Nevis continues its growth across all parishes. All parishes registered increased population density with the exception of St George which has decreased in density for the past three census periods. St Paul which is home to Charlestown is the both the smallest parish in Nevis by land size and the densest parish in Nevis (as well as the Federation). This is in large part due to the attraction of the urban center. St John has the second highest population density in Nevis and this can be directly attributed to the addition of multiple housing schemes in the parish over the intercensal period. St James conversely is the largest parish on Nevis (and the Federation) by mass but has the lowest density of the country.

Age and Sex Composition

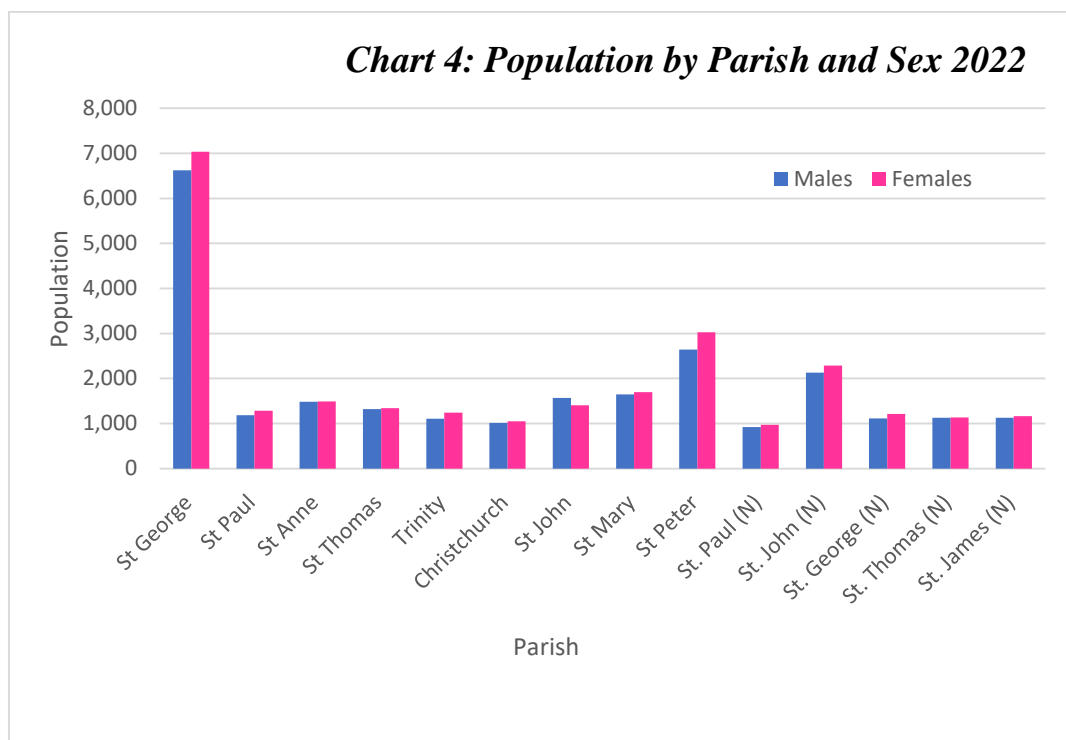

Of the 51,320 persons counted in the 2022 census, there were 25,000 males and 26,320 females. There were 1,320 more females than there were males. This gives a sex ratio of 95.0. That is, for every 100 females in the population there are 95 males. Males account for approximately 49% of the population. On St Kitts there were 18,580 males and 19,558 females with a sex ratio of 95.0. Nevis counted 6,420 males and 6,762 females for a sex ratio of 94.9.

Table 5: Population by Sex and Parish 2022

<i>Parish</i>	<i>Population</i>			<i>Sex Ratio</i>
	<i>Males</i>	<i>Females</i>	<i>Total</i>	
St George	6,620	7,032	13,652	95.7
St Paul	1,183	1,285	2,468	92.1
St Anne	1,482	1,487	2,969	99.7
St Thomas	1,317	1,340	2,657	98.3
Trinity	1,109	1,239	2,348	89.5
Christchurch	1,014	1,050	2,064	96.6
St John	1,568	1,404	2,972	111.7
St Mary	1,648	1,693	3,341	97.3
St Peter	2,639	3,028	5,667	87.2
St Kitts	18,580	19,558	38,138	95.0
St. Paul (N)	920	968	1,888	95.0
St. John (N)	2,133	2,283	4,416	93.4
St. George (N)	1,113	1,210	2,323	92.0
St. Thomas (N)	1,128	1,137	2,265	99.2
St. James (N)	1,126	1,164	2,290	96.7
Nevis	6,420	6,762	13,182	94.9
St Kitts and Nevis	25,000	26,320	51,320	95.0

There is great variation in the ratio of males to females by parish on St Kitts. There are only 87 males per 100 females in St Peter, followed by Trinity with approximately 90 males per 100 females. St John is the only parish within the Federation with more males than females. There are 111 males for every 100 females. St Anne has only five more females than males in the population which gives an approximate ratio of 1 male for each female in the parish.

On the island of Nevis, St Thomas has a sex ratio of 99 males for every 100 females in the parish followed by St James with approximately 97 males per 100 females. St George has the lowest ratio of 92 males per 100 females.

The median age is the age at the midpoint of the population. Half of the population is older than the median age and half of the population is younger than this age. The mean age is what is commonly referred to as the average age of the population which is derived by taking the sum of the ages of the total population and dividing by the count of this population.

The 2022 population and housing census registered a federal median age of 34 and a mean age of 36. Females show a median age of 35 and a mean age of 36, while males have a median age of 34 and a mean age of 35. Statistically females are older than males. The median age for persons on St Kitts is 34 while the mean age is 35. Nevis registers a median age of 36 and a mean age of 37. Nevis has an older population on average than St Kitts.

Table 6: Mean and Median Age by Parish

Parish	Mean Age			Median Age		
	Male	Female	Total	Male	Female	Total
St George	36	37	37	35	36	36
St Paul	33	34	33	31	33	32
St Anne	34	35	34	32	33	33
St Thomas	33	35	34	31	34	33
Trinity	35	35	35	31	30	31
Christchurch	34	34	34	32	33	33
St John	35	36	35	34	36	35
St Mary	35	35	35	34	34	34
St Peter	35	34	35	33	32	32
St Kitts	35	36	35	34	34	34
St. Paul (N)	36	38	37	37	37	37
St. John (N)	34	35	35	33	35	34
St. George (N)	38	39	39	37	37	37
St. Thomas (N)	38	38	38	39	37	38
St. James (N)	37	38	38	36	36	36
Nevis	36	37	37	36	36	36
St Kitts and Nevis	35	36	36	34	35	34

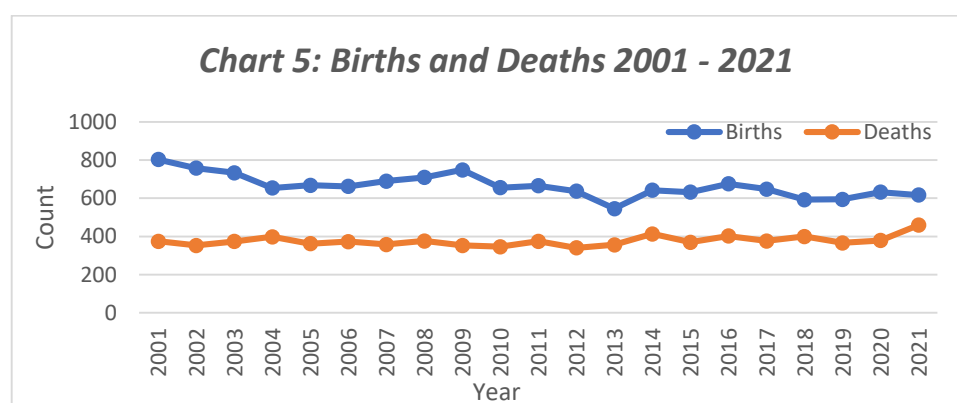

The median age of the population has increased over the period 2001 to 2022. The median age of the federation in 2001 was 27 years. This figure increased to 31 in 2011 and now stands at 34 years. A similar change is noted in each individual island with St Kitts moving from 26 years in 2001 up to 34 currently while Nevis showed consistency as the older of the two islands with a median age of 30 years in 2001 rising to 36 in 2022.

Table 7: Median Age by Island 2001 - 2022

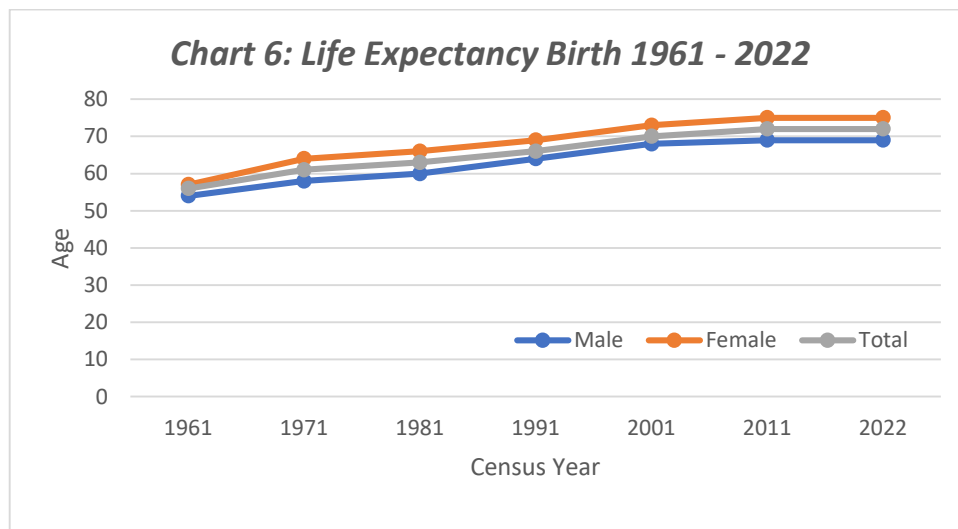

Island	Year		
	2001	2011	2022
St Kitts	26	30	34
Nevis	30	34	36
St Kitts and Nevis	27	31	34

Like most of the Caribbean region, St Kitts and Nevis has seen a reduction in natural increase over the years. That is, the ratio of births to deaths has decreased. Fewer persons are being born as compared to the number dying. This has resulted in a smaller increase in population due to persons being born.

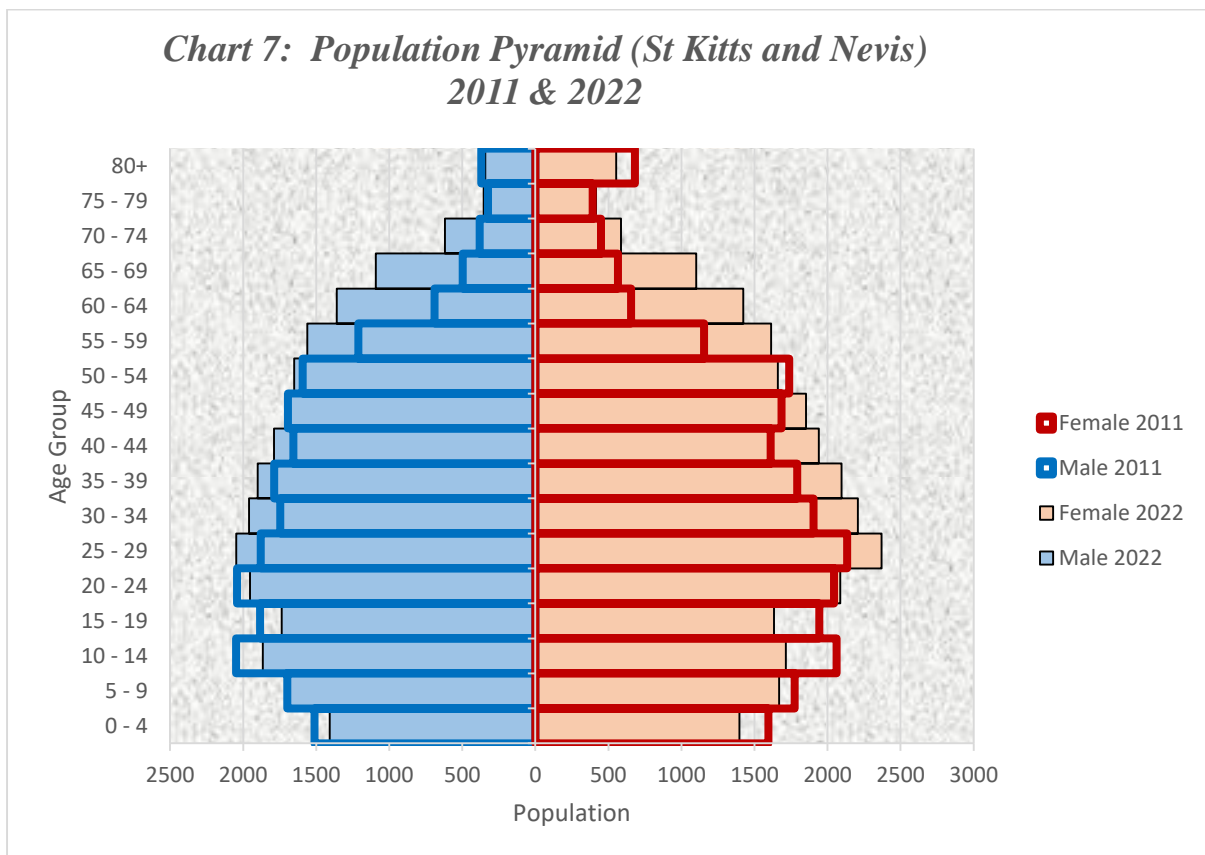

St Kitts and Nevis has an aging population. with changes in structure and composition being caused more by migration and less through natural increase. Over the period 2001 to 2010, natural increase would have accounted for 3,415 persons being added to the population at an average of 342 (341.5) persons per year. As our society has developed, we have seen wider access to and use of contraceptives and family planning options, more career-oriented females, deferred marriages and a corresponding decrease in natural increase. The period 2011 to 2021 saw 2,647 persons being added to the population through natural increase at an average of 241 (240.63) persons per year.

With advances in medical technology coupled with increased health care options and easier and cheaper health care access, St Kitts and Nevis has seen a significant increase in life expectancy at birth. Males went from a life expectancy at birth of 54 years in 1960 to 69 years in 2022. Females generally live longer than men with their life expectancy of 57 years in 1960 increasing to 75 years on average in 2022. Collectively, the average person can expect to live 72 years in 2022 as compared to just 56 in 1960.

The pyramid below compares the age structure of the population in 2011 as compared to the current population in 2022. While both time periods are characteristic of a developed society with an aged population, note the lower proportions of population in the 0-19 population in 2022 as against 2011 and conversely the higher populations as the ages increase. As indicated before, women generally live longer than men which is highlighted by the greater proportion of women over the age of 70 as against men over 70.

Household Count and Size

A total of 21,677 households were recorded during the enumeration exercise. This represents an increase of 28% when compared to the 2011 census where 16,926 households were recorded. St Kitts recorded a 31% increase in households with an increase of 3,844 households from 12,299 in 2011 to 16,143 in 2022. On Nevis, there was a 19.6% increase in households with 5,534 households being recorded as against 4,627 households in 2011.

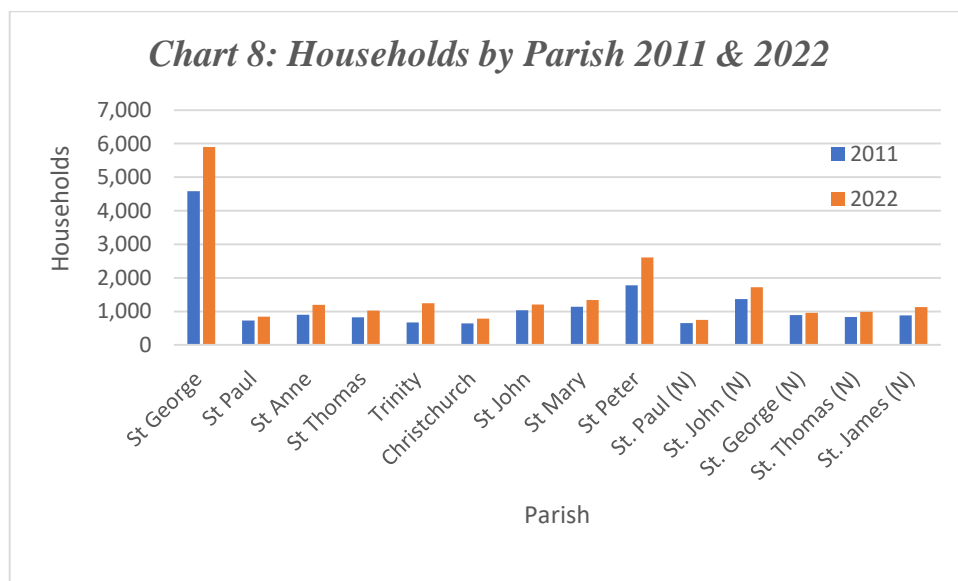

Table 8: Household Count by Parish St Kitts and Nevis 2011 and 2022

Parish	Household Count			
	2011	2022	Increase	% Change
St George	4,581	5,902	1,321	28.8
St Paul	731	846	115	15.7
St Anne	902	1,196	294	32.6
St Thomas	823	1,021	198	24.1
Trinity	668	1,247	579	86.7
Christchurch	640	787	147	23.0
St John	1,038	1,202	164	15.8
St Mary	1,141	1,337	196	17.2
St Peter	1,775	2,605	830	46.8
St Kitts	12,299	16,143	3,844	31.3
St. Paul (N)	650	749	99	15.2
St. John (N)	1,369	1,724	355	25.9
St. George (N)	893	953	60	6.7
St. Thomas (N)	834	983	149	17.9
St. James (N)	881	1,125	244	27.7
Nevis	4,627	5,534	907	19.6
St Kitts and Nevis	16,926	21,677	4,751	28.1

On St Kitts, the parish of Trinity registered the largest percentage increase in the number of households with an approximate 87% increase, almost doubling in households, moving from 668 households in 2011 to 1,247 in 2022. St Peters also experienced very high levels of growth with a 47% increase, growing from 1,775 households to 2,605 Significant increases in the

number of households (exceeding 15%) were noted in all other parishes on St Kitts with St Anne (32.6%), St Thomas (24%), Christchurch (23%), and St George (29%) being particularly noteworthy.

The largest increase in the number of households on Nevis was recorded in the parish of St James with an 28% increase moving from 881 households in 2011 to 1,125 households in 2022. St John was a close second with an increase from 1,369 households in 2011 to 1,724 households in 2022 which represented an increase of 26%. St Thomas registered a significant 18% increase in the number of households with 983 households in 2022 as against 834 in 2011.

There was a 15% decrease in the national average household size over the intercensal period. The average household size in 2011 was 2.79 persons per household. The average household size in 2022 is now 2.37 persons per household. The average household size in St Kitts is 2.36 persons per household, down from 2.84 persons per household in 2011. This represents a 17% decrease in household size. On Nevis, the average household size is 2.38 persons per

household, down from 2.65 persons per household in 2011, which is a 10% decrease in household size.

Trinity registered the largest decrease in average household size on the island of St Kitts. This figure moved from 2.55 persons on average per household down to 1.88 persons per household on average. This also places Trinity as the parish on St Kitts and nationally with the lowest average household size. While the parish of St Paul has registered consistent decreases in average household sizes for each census since 2001. It remains the parish with the largest average household size on St Kitts and nationally with 2.92 persons per household down from 3.33 persons per household in 2011 and 3.44 persons in 2001.

On Nevis, St James registered an average household size of 2.04 persons per household in 2022 which is a 12% decrease from its 2011 figure of 2.31 persons per household. St John has surpassed St Paul as the parish with the largest average household size on Nevis. With its average size of 2.56 persons per household, it is marginally more than St Paul's 2.52 persons per household.

Table 9: Average Household Size 2001, 2011 & 2022

Parish	Household Size			% Change in 2022
	2001	2011	2022	
St George	2.87	2.76	2.31	-16.1
St Paul	3.44	3.33	2.92	-12.3
St Anne	3.00	2.91	2.48	-14.7
St Thomas	3.02	3.08	2.60	-15.5
Trinity	2.86	2.55	1.88	-26.1
Christchurch	2.92	3.00	2.62	-12.7
